

StarterChef

AI cooking companion for beginners

CS3216 A3 PITCH

Your AI cooking companion, from pantry to plate.

StarterChef helps beginner cooks make the most of what they have, get unstuck in the kitchen, and build confidence — with personalised help at every step.

Scan your kitchen

Snap a photo of your ingredients and let AI see what you have.

Recipes that fit you

Get realistic, personalised recipe ideas based on your ingredients, time and skill level.

Cook hands-free

Follow step-by-step guidance with timers, voice support and helpful tips.

Improve over time

Save what worked, get smarter suggestions and build your cooking confidence.

A complete cooking journey, powered by AI.

From the ingredients you have, to a meal you can cook, to a better you next time.

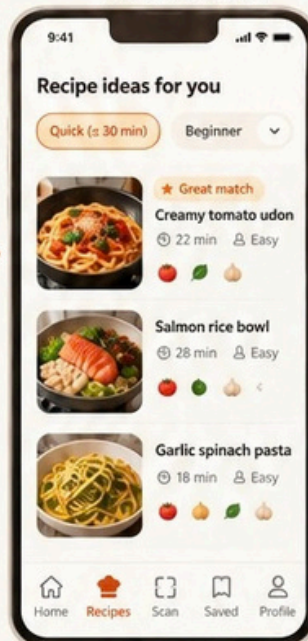

1 Scan

Show what you have in your kitchen.

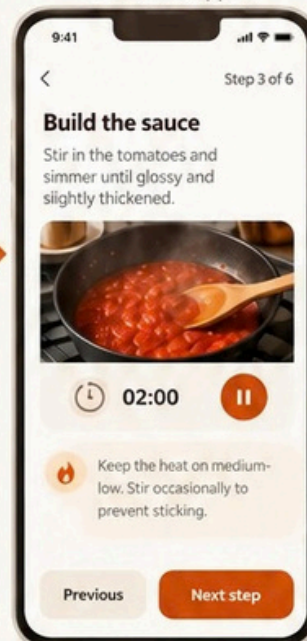

2 Recommend

Get recipe ideas that fit your ingredients, time and skill level.

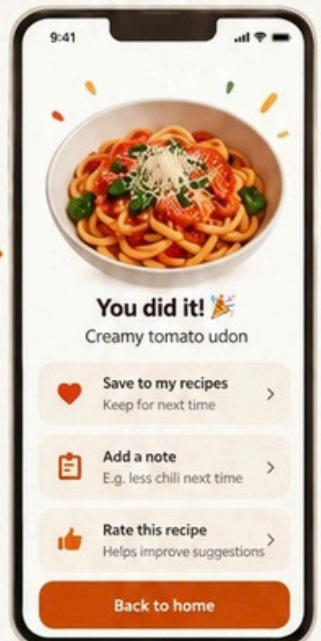

3 Cook

Follow step-by-step guidance, with timers and voice support.

4 Learn

Save what worked and get better suggestions next time.

**Not just recipes.
It cooks with you.**

StarterChef turns a fragmented recipe experience into one continuous journey — from the ingredients you have, to a meal you can cook, to a better you next time.

AI cooking companion for beginners

WHY IT DESERVES THE COOLNESS POINTS

More than one AI trick. A product architecture around uncertainty.

The coolest part is not any single model call. It is how the product combines multimodal AI, structured outputs, tool calling, persistent identity and memory while keeping consequential changes visible and controllable.

AI integrated into the product

1

Multimodal understanding

Kitchen scans, recipe photos, cooking checkpoints and video imports become structured data.

2

Structured + constrained

Schemas validate outputs; recipe edits use constrained tools instead of arbitrary state changes.

3

Context where it matters

The assistant knows the current recipe, cooking step and session - no repeated context dumping.

4

Memory across sessions

Questions, checkpoints, substitutions and feedback can shape future cooking experiences.

Designed for AI failure, not just demos

HUMAN-IN-THE-LOOP

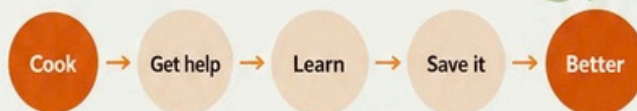

Uncertain output is visible.

Low-confidence scan detections are left unchecked. Users can edit the AI output, and nothing is saved until they confirm it.

Convenience without silent automation.

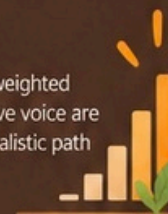

The compounding loop

StarterChef can preserve successful substitutions, equipment work-arounds and user feedback instead of forgetting the session when the chat ends.

BUILT WITH REAL-WORLD CONSTRAINTS

AI actions have different costs. StarterChef models weighted credit usage so lightweight text, video imports and live voice are not treated as equivalent. That gives the product a realistic path beyond a classroom demo.

**StarterChef does not just
generate recipes.
It cooks with you.**
